Ryan Young

Software Developer

**Entry level front-end developer. Quick adaptation to new languages and tools.
Takes pride and satisfaction in creating relevant and useful software.
Most familiar with the React framework for front-end development.**

EXPERIENCE

Front End Developer — *Inboard* (July 2019-Today)
- o   Using React to contribute towards a developing SaaS.
- o   Responsible for building system features such as navigation and user settings.

Instagram Application — *Database Class* (Winter 2019)
- o   Designed and implemented a social media application similar to Instagram, using React Native and SQLite.
- o   Developed both the front end and back end to manage posts from a database and display them.

Weather Forecast — *Web Programming Class* (Spring 2019)
- o   Built a HTML page acting as a weather report for a given city using the Open Weather Map API, with a heat map specifically for Northern California.

Translation and Review Tool — *Web Programming Class* (Spring 2019)
- o   React page that uses Google API to perform English to Spanish translations and saves them in a flashcard format.
- o   Developed the display and UI based on given designs and the back end pipeline. Used SQLite to store flashcard data.

Video Game Projects — (September 2016 – June 2019)
- o   Designed several independent games and ideas.
- o   Designed UI and game mechanics on premises that test players' reflexes and awareness using the Unity engine.
